9) What are the different shell variables available in Unix Operating System ?

10) Write the syntax of if-then-else-fi statement with an example.

11) Mention any two functions of system administrator.

12) What is distributed file system ?

P.T.O.

SECTION – B

II. Answer **any five** questions : (5×10=50)

13) a) Explain unix architecture with a neat diagram.

b) Explain the following commands with Syntax and example.

1) pwd   2) mkdir

3) cal   4) cp

5) tput (5+5)

14) a) What is a file system ? Explain the basic types of files in Unix.

b) Explain the various purpose of cat command. (5+5)

15) a) Explain the different types of processes in Unix Operating System.

b) Explain process related commands in Unix O.S. (5+5)

16) a) Explain u limit and all the options of df and du commands.

b) Define filter. Explain any 4 filter commands with Syntax and example. (5+5)

17) a) Write a note on awk programming.

b) Write a shell script to find the number of occurrences of a particular character in a given string. (5+5)

18) a) Explain different types of tests used in shell script with an example.

b) Explain ls command with different options. (5+5)

19) a) Explain positional parameters in Unix Shell Programming.

b) Write a note on Unix System Communication Commands. (5+5)

20) a) Explain different privileges of a system administrator.

b) Explain user management in Unix O.S. (5+5)
